DATE MAILED: 02/01/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/827,011

Applicant(s)

SANKURATRIPATI ET AL.

Examiner

Thomas K Pham

Art Unit

2121

-- The MAILING DATE of this communication appears on the cover sheet with the corresponding address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 14 October 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-24 and 26-34 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-24 and 26-34 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Response to Amendment**

1. This action is in response to request for re-consideration filed on 10/14/2004.
2. Claims 1-24 and 26-34 have been considered but they are not persuasive.
3. The amendment to claims 1, 15 and 23 necessitated the new ground(s) of rejection presented in this Office Action.

**Quotations of U.S. Code Title 35**

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

### **Claim Rejections - 35 USC § 102**

8. Claims 1-2, 8, 12-14 and 23-28 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,948,061 ("Merriman").

#### **Regarding claim 1**

Merriman teaches an advertisement selection and delivery system for selecting advertisements based on profile information and rendering the advertisements as accessible to a user operating a network-capable appliance connected to a data-packet-network comprising:

- a first server node connected to the network, the first server node functioning as a user access point on the network (fig. 1, element 12 and col. 4 lines 16-19, "The affiliates may be ISP's ... single computer with a browser");
- a mass storage repository accessible to the first server node, the repository for storing and serving user profile data (fig. 2, element 52) accumulated, at least, by monitoring user Internet navigation behavior (col. 8 lines 33-41, "The reporting process uses ... by users of affiliate web sites" [the number of viewings and click throughs of various web pages are all part of the navigation behavior of a user]);
- a second server node connected to the network, the second server node for generating user preference data (fig. 1, element 19);
- at least one advertisement server connected to the network, the advertisement server for serving advertisement data (fig. 1, element 18);
- a software application for generating user preference lists and performing advertisement selection (col. 5 lines 50-63, "the ad server 19 obtains ... location of their domain"); and

Art Unit: 2121

- at least one network-capable appliance connected to the network, the network-capable appliance for receiving the advertisement data, wherein a user operating the network-capable appliance accesses the first server node and receives the advertisement data, the advertisement data selected for service by matching the user preference data to stored advertisements and rendered accessible to the user during the time of user access to the system from the network-capable appliance (col. 3 lines 25-63, “on a computer or PDA or other Internet capable ... the advertising web server”).

**Regarding claim 2**

Merriman teaches the data-packet-network is the Internet network (abstract).

**Regarding claim 8**

Merriman teaches the first server node is a cobranded server node servicing clients of a cobrand partner to the entity hosting the system (col. 4 lines 13-19, “the affiliate web sites ... single computer with a browser”).

**Regarding claim 12**

Merriman teaches the network-capable appliance accesses the system is a PDA. (col. 3 lines 25-30, “PDA or other Internet capable ... using the same protocol”). It is inherent to one of ordinary skill in the art that PDAs are capable of connecting wirelessly to a network.

**Regarding claim 13**

Merriman teaches the preference lists are generated using a knowledge base data system (col. 8 lines 35-46, “the number of viewings ... the display of the advertisements”).

**Regarding claim 14**

Art Unit: 2121

Merriman teaches the preference lists are used as search criteria in conjunction with a search engine (col. 5 line 64 to col. 6 line 11, "Each advertisement along with ... a match should be selected").

### **Regarding claim 23**

Merriman teaches a method for dynamically serving advertisement data based on user profile information to a user interface maintained on a data-packet-network comprising the steps of:

- a) compiling and storing the user profile information on an ongoing basis (col. 7 lines 46-56, "In addition, as part of the ... include the domain name"), at least, by monitoring user navigation behavior on the data-packet network (col. 8 lines 33-41, "The reporting process uses ... by users of affiliate web sites" [the number of viewings and click throughs of various web pages are all part of the navigation behavior of a user on a network]);
- b) accessing the user profile information in order to mine the information (col. 5 lines 50-63, "the ad server 19 obtains ... the location of their domain");
- c) mining the accessed user profile information for preference data (col. 5 line 64 to col. 6 line 11, "Each advertisement along with ... a match should be selected");
- d) formulating the preference data into a concise summary-data list (col. 3 lines 52-63, "Upon receiving the request ... the advertising web server");
- e) selecting pre-configured advertisements from a database containing stored advertisements, the selection accomplished by matching the advertisements to data contained in the summary-data list (col. 6 lines 12-26, "determining which advertising object ... transmitting back to the user"); and

Art Unit: 2121

- f) serving the selected advertisements to the user interface (col. 3 lines 25-30, “on a computer or PDA or other Internet capable ... using the same protocol”).

**Regarding claim 24**

Merriman teaches the data-packet-network is the Internet network (abstract).

**Regarding claim 26**

Merriman teaches compilation of user profile information is augmented through manual data procurement methods (col. 5 lines 47-49, “a promotional advertisement ... his or her employer”).

**Regarding claim 27**

Merriman teaches steps (b)-(f) are performed as a sequence launched as a result of the profile the user connecting to an accessing the user interface using a network-capable appliance (col. 5 line 50 to col. 6 line 59, “the ad server 19 obtains ... stored in RAM in one or more messages”).

**Regarding claim 28**

Merriman teaches data mining is accomplished through a parsing method (col. 7 lines 37-43, “a click through may be ... the advertising server process 19”).

9. Claims 15-22 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,913,040 (“Rakavy”).

**Regarding claim 15**

Rakavy teaches a preference-data generation server for generating preference data using data mined from user profile data comprising:

- a data port for receiving user profile data (fig. 3, element 754);

Art Unit: 2121

- a data port for accessing a knowledge database (col. 9 lines 8-15, “The User Preference ... to the other processes”); and
- a software application for mining the user profile data and for generating preference summaries by equating the mined profile data to pre-established preference categories listed in the knowledge database (col. 9 line 63 to col. 10 line 8, “The Job Manager 720 ... to a wider range of users”);
- wherein the profile data is accumulated, at least, by monitoring user navigation behavior on a data-packet-network (col. 3 lines 44-49, “The system monitors the user’s ... made available to the advertisers” [the user’s interaction, how many times accessing a web page or how user’s response to an advertise are all part of the navigation behavior of a user]).

**Regarding claim 16**

Rakavy teaches the preference summaries are generated in the form of categorized and prioritized data lists (col. 9 line 63 to col. 10 line 8, “The Job Manager 720 ... to a wider range of users”).

**Regarding claim 17**

Rakavy teaches a data port for receiving pre-configured advertisement data (fig. 10, element 250); a data port for serving advertisement data (fig. 10, element 210); and a software application for matching the advertisement data to individual ones of generated data lists and for selecting the advertisement data most closely matching the generated data lists for service (col. 9 line 63 to col. 10 line 8, “The Job Manager 720 ... to a wider range of users”).

**Regarding claim 18**

Art Unit: 2121

Rakavy teaches the matching advertisement data is served to a network-access point established on a data-packet-network (col. 4 lines 39-45, "FIG. 1 shows an overall view ... nodes on the Network 700").

**Regarding claims 19 and 22**

Rakavy teaches the network-access point is a server node and the data-packet-network is the Internet network (col. 5 lines 8-19, "The Network 700 is ... which to communicate").

**Regarding claim 20**

Rakavy teaches a data port for serving the prioritized data lists (col. 9 line 63 to col. 10 line 8, "The Job Manager 720 ... to a wider range of users").

**Regarding claim 21**

Rakavy teaches the prioritized data lists are served to at least one advertisement server operating on a data-packet-network (col. 4 lines 39-45, "FIG. 1 shows an overall view ... nodes on the Network 700").

**Claim Rejections - 35 USC § 103**

10. Claims 3 and 6-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,948,061 ("Merriman") in view of U.S. Patent 6,651,190 ("Worley").

**Regarding claim 3**

Merriman teaches the first server node and the second server node are connected to the internet but does not teach the nodes connecting to each other by a separate dedicated network in addition to being connected to the Internet. However, Worley discloses these features in figure 3 where the "dedicated network" for connecting between the remote computer stations (130, 132) and the

Art Unit: 2121

host computer is by dialing directly using a direct cell connection (140) or a direct land line to the cell wireless modem connection (not shown) in addition to connecting to via the Internet for communication with the host computer. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the communication of Worley with the system of Merriman because it would provide to serve as a backup communication method in case the Internet connection is not available or down.

**Regarding claim 6**

Merriman teaches the software application resides in whole and executes on the second server node and advertisement selection is performed by the second server node using advertisements delivered thereto from the at least one advertisement server (col. 3 lines 52-63, "Upon receiving the request ... the advertising web server").

**Regarding claim 7**

Merriman teaches the second server node also serves the selected advertisements (col. 3 line 64 to col. 4 line 11, "when the user clicks ... to redirect the user's browser").

11. Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,948,061 ("Merriman") in view of U.S. Patent No. 5,933,811 ("Angles").

**Regarding claim 4**

Merriman teaches the advertisement selection and delivery system but does not teach the software application is distributed in part on the second server node and in part on the at least one advertisement server. However, Angles teaches the software application is distributed in part on the content provider computer 14 (second server node) and in part on the at least one

Art Unit: 2121

advertisement computer 18 (advertisement server) (col. 8 lines 35-65, "At start state 300 ... into a displayable page") for the purpose of separately processes the user requested web page at one server and the customized an advertisement at a different server which dedicated for the job. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the system of Angles with the system of Merriman because it would provide for the purpose of separately processes the user requested web page at one server and the customized an advertisement at a different server which dedicated for the job.

**Regarding claim 5**

Angles teaches the part of the software application executing on a second server node directs generation of user preference lists and the part of the software application executing on the at least one advertisement server performs the advertisement selection according to a user preference lists obtained from the second server (col. 14 lines 19-50, "The demographic data ... content provider computer 14").

12. Claims 9 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,948,061 ("Merriman") in view of U.S. Patent 6,230,199 ("Ravashetti").

**Regarding claims 9 and 34**

Merriman teaches the advertisement selection and delivery system but does not teach the advertisements include e-mail messages. However, Ravashetti discloses typical advertisement messages including email communication (col. 2 lines 25-31) for the purpose of providing another option to communicate with a client over the network. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the email

Art Unit: 2121

communication of Ravashetti with the system of Merriman because it would provide for actively marketing products and services to a user of a client computer over a network.

13. Claims 10-11 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,948,061 ("Merriman") in view of U.S. Patent 6,665,715 ("Houri").

**Regarding claims 10 and 33**

Merriman teaches the advertisement selection and delivery system but does not teach the advertisements include instant messages. However, Houri discloses an example of collecting user data using instant messaging environments (col. 8 lines 37-56) for the purpose of gathering geographic location information from the users for advertising preferences. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the instant messages of Houri with the system of Merriman because it would provide for the purpose of gathering geographic location information from the users for advertising preferences.

**Regarding claim 11**

Merriman teaches the advertisements include banner advertisements (col. 3 lines 30-34, "Those messages 22 preferably ... such as banner advertisement").

14. Claims 29-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,948,061 ("Merriman") in view of U.S. Patent No. 5,913,040 ("Rakavy").

**Regarding claim 29**

Merriman teaches the advertisement selection and delivery system but does not teach the preference data is categorized and prioritized according to pre-configured preference categories

Art Unit: 2121

related to types of advertisements. However, Rakavy teaches the preference data is categorized and prioritized according to the user interaction while responding to advertising messages (col. 3 lines 34-43, "Users may enter their ... for on-line customers") for the purpose of matching the user preferences and configuration data against the category information for the available advertisement. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the categorizing and prioritizing of Rakavy with the system of Merriman because it would provide for the purpose of matching the user preferences and configuration data against the category information for the available advertisement.

**Regarding claim 30**

Rakavy teaches the summary-data list is of the form that can be propagated through the network (col. 7 lines 14-29, "Each Advertisement 50 in the ... by various Advertisements 50").

**Regarding claim 31**

Merriman teaches the summary-data list is sent to an advertisement server wherein the advertisement server performs steps (e) and (f) (col. 6 lines 12-26, "determining which advertising object ... transmitting back to the user").

**Regarding claim 32**

Rakavy teaches the Advertising System Server 600 is a single server node on the Network 700 (col. 4 lines 43-45, "Advertising System ... on the Network 700") that performed steps (c)-(f) (col. 3 lines 5-51, "downloading and presenting individualized advertisements ... WEB site on the network").

***Response to Arguments***

*In the remark the applicant argues that cited reference fails to disclose:*

- I) “the repository for storing and serving user profile data accumulated, at least, by monitoring user Internet navigation behavior or on a data-packet-network” as to claims 1 and 23.
- II) “the profile data is accumulated, at least, by monitoring user navigation behavior on a data-packet-network” as to claim 15.

*In response to applicant’s argument,*

- I) It is noted that prior art Merriman (5,948,061) teaches column 8 lines 33-42 as follow:

“ The reporting process uses standard database techniques for generating any desired reports. For example, reports showing the number of viewings and click throughs of various advertisements may be generated along with reports showing the click through rates relative to the matching criteria. Also, reports on the SI can be readily generated.

In addition to using the domain profiling process and logging advertisement clicked on by individual users and the pages being accessed by users of affiliate web sites, in addition surveying may be used.”

By extracting information from a user database repository, the report displays the accumulative data of a user on the number of viewings and interaction of various advertisements web pages at affiliate web sites. It is clear to one of ordinary skill in the art that “logging advertisement clicked on by individual users and the pages being accessed by users” is no different than logging the user navigation behavior on the Internet. Therefore, the limitations are met by the reference.

- II) Prior art Rakavy (5,913,040) teaches column 3 lines 44-47 as follow:

“ The system monitors the user's interaction with the advertisements and produces raw data on how many times a particular advertisement was accessed as well as the user's response to advertisements. All pertinent information is stored and sent back to a network server where it is made available to the advertisers.”

The user’s interaction on a data-packet network is accumulated into individual profile of a user which is made available to advertisers for presenting advertisement appropriately according to

Art Unit: 2121

the user behavior of navigation through the web pages. Regardless of whether the web pages are the advertisement or not, the number of times a user views a particular page and/or user response to the page are all part of a user navigation behavior as claimed. Therefore, the limitations are met by the reference.

### ***Conclusion***

15. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner *Thomas Pham*; whose telephone number is (703) 305-7587 and fax number is (703) 746-8874, Monday-Thursday and every other Friday from 7:30AM- 5:00PM EST or contact Supervisor *Mr. Anthony Knight* at (703) 308-3179.

Art Unit: 2121

Any response to this office action should be mailed to: **Commissioner for Patents, P.O. Box 1450, Alexandria VA 22313-1450**. Responses may also be faxed to the **official fax number (703) 872- 9306**.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
